

The Convenient and Environmentally Friendly Fire Log

The **Ecolog** is an environmentally friendly and compact fire log for all types of stoves and fireplaces. Start your fire in seconds and enjoy it for hours. This superior quality product is made from small pieces of stems and leaves of cotton plants, mixed with pure high quality paraffin wax, the same as used in normal candles we burn at home.

The **Ecolog** burns with a warm and nice flame, which lasts for a long time. The emissions are only a fraction of those of conventional wood, why it is a natural choice for today's environmentally friendly consumers. We use a packaging material made from patented *Policarta*[®] ecological paper with ecological ink and thermoplastic lacquer — contrary to most competitors typically using thermoplastic polyethylene that produces toxic fumes when burned.

The **Ecolog** has been patented based on its pure and unconventional biomass and the innovative production method that we have developed.

The **Ecolog** has an appealing packaging with an ecological profile. It is easy to sell, distribute and for the consumer to carry home. Simply place it in the fireplace and light two corners of the package — enjoy the cosy fire!

Specifications

- Burning Time: Up to about 2 hours, depending on stove and conditions
- Biomass: Stems and leaves from cotton plants
- Bonding Material: High quality paraffin wax with less than 1 % oil
- Biomass Contents: 60 % by weight
- Wax Contents: 40 % by weight
- Packaging: Ecological paper, ink and lacquer
- Dimensions: Approx. 80 x 80 x 270 mm
- Weight: 1,200 grams, ±5 %
- Gross Heat Content: Approx. 40,000 BTU
